

# Trail Usage and Monthly Counts from January 2019 through September 2021

**A** Trail usage spiked from April 2020 to May 2020 at the onset of the pandemic and remained higher for the remaining months of the year compared to 2019 and to comparable months in 2021.

**B** Trail usage is down from June 2021 to September 2021 compared to pre-COVID 2019 conditions and 2020 levels.

Note: Data shown in this chart is from four permanent count locations in Pennsylvania (Chester Valley Trail, Delaware River Trail at Port Richmond, Schuylkill River Trail at Spring Mill, and Wissahickon Trail) that were able to be compared for the same time period between January 2019 and September 2021, with the exception of April and May 2021 where one of the counters was down and totals were not available. Year-to-year figures do not account for fluctuation in weather, which may have significant impacts on trail usage. Visit <https://dvrpc.org/webmaps/pedbikecounts/> for more information and details on the pedestrian and bicycle counting program.
