

Trail Usage and Monthly Counts from January 2019 through December 2021

A Trail usage spiked from Apr 2020 to May 2020 at the onset of the pandemic and remained higher for comparable months in 2019 and 2021.

B From Jun 2021 to Sep 2021 trail usage is down compared to pre-COVID 2019 and 2020 levels.

C From Oct 2021 to Dec 2021 trail usage is on par or eclipsed 2019 levels.

Note 1: Data shown in this chart is from four permanent count locations in Pennsylvania (Chester Valley Trail, Delaware River Trail at Port Richmond, Schuylkill River Trail at Spring Mill, and Wissahickon Trail) that were able to be compared for the same time period between January 2019 and December 2021, with the exception of April and May 2021 where one of the counters was down and totals were not available. Year-to-year figures do not account for fluctuation in weather, which may have significant impacts on trail usage. Visit <https://dvrpc.org/webmaps/pedbikecounts/> for more information and details on the pedestrian and bicycle counting program.
