**Diverse Downtowns**

75 of the region’s downtowns were analyzed, and each were assigned a Diversity Score and a Pandemic Impact Score on scales of 1—100, with one being the most diverse and least impacted.

This effort found that more diverse downtowns were generally less impacted by the economic shutdown related to the COVID-19 pandemic.

All 75 of the downtowns that were analyzed are listed, along with their Pandemic Impact Scores, in order from most to least diverse.

**Disclaimer:**
This is an analysis of visits to and trade areas of the region's downtowns. However, it is not an economic impact analysis. Retail sales were not part of this body of work.
Characteristics that reduced the pandemic’s impact:

Downtowns with the following characteristics were generally less impacted by the pandemic than their peers.

**Development**
Recent mixed-use, residential, and retail developments within the downtowns increased diversity as well as resiliency.

**Diversity**
Downtowns with diverse built environments, demographics, local economies, mix of uses, and transportation options, were less impacted.

**People**
Diverse and permanent residential populations located within the downtowns provided retailers with customers even as people stayed close to home.

**Trails**
Existing Circuit Trails connected downtowns with open space and enabled alternative modes of transportation.

**Walkability**
Historic downtowns with more pedestrian-friendly built environments had greater resiliency.
Downtowns that lacked the characteristics found to reduce the pandemic’s impact, or that were more greatly defined by the following characteristics, were generally more impacted by the pandemic than their peers.

<table>
<thead>
<tr>
<th></th>
<th>Characteristics that exacerbated the pandemic’s impact:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cars</td>
<td>Auto-oriented downtowns with lower Walk Scores and more cars per household were more impacted by the pandemic.</td>
</tr>
<tr>
<td>Colleges</td>
<td>Downtowns that are overly-reliant on these anchor institutions were less resilient during the pandemic.</td>
</tr>
<tr>
<td>Goods &amp; Services</td>
<td>As the share of Neighborhood Goods &amp; Services (NGS) retailers increased in a downtown, so did the pandemic’s impact.</td>
</tr>
<tr>
<td>Transit</td>
<td>The pandemic significantly reduced transit ridership, and this impact had a ripple effect in transit-oriented downtowns.</td>
</tr>
<tr>
<td>Vacancy</td>
<td>The pandemic had a greater impact as downtown vacancy rates increased.</td>
</tr>
</tbody>
</table>
For the 75 downtowns analyzed, each were assigned a Diversity Score and a Pandemic Impact Score on scales of 1—100, with one being the most diverse and least impacted. The more diverse downtowns were generally less impacted by the pandemic.

Malvern’s downtown is a historic and somewhat walkable downtown. Mixed-use development in recent years helped increase the residential population and add to the mix of retail uses. However, it lacks the civic and cultural uses that other downtowns have. These qualities are why Malvern received a Diversity Score of 51, which is average for the region.

Despite its relatively average Diversity Score, Malvern was less impacted than the average downtown and received a Pandemic Impact Score of 45. This is most likely due in part to the robust residential population and development that expanded the downtown in recent years.
Downtown Typologies

Nine downtown typologies were identified and the average Pandemic Impact Score was determined for each: Brewery (45), Circuit (48), Classic (46), College (50), Core (43), Expanding (42), Historic (47), Opportunity (45), and Transit-Oriented (50).

In general, more typologies equated to a lower Pandemic Impact Score. Malvern is considered to be three typologies: Expanding, Historic, and Transit-Oriented. Downtowns that are considered to be three typologies had an average Pandemic Impact Score of 53.

It is worth highlighting that Transit-Oriented downtowns were some of the most impacted types, but Expanding downtowns were the least impacted.
Downtown Population

A negative correlation between the estimated population of the region's downtowns and the Pandemic Impact Score was identified. In other words, the larger the downtown population, the smaller the impact.

In 2019, the population in Malvern was estimated to be 258, compared to the average of 165 for all downtowns and 326 for the least impacted downtowns.

SOURCE: BUXTON CO.
Retail accounts for 57% of the uses in Malvern, which is equal to the average of 57% for all downtowns and slightly less than the average of 60% for the least impacted downtowns.

In the least impacted downtowns, Food & Beverage (FB) retailers account for a larger share at 30%, and General Merchandise, Apparel, Furnishings & Other (GAFO) retailers account for a smaller share at 38%. On average, as the share of each of these increased the Pandemic Impact Score decreased. Conversely, in the least impacted downtowns, Neighborhood Goods & Services (NGS) retailers made up a slightly smaller share on average at 30%. As the share of NGS retailers increased, so did the Pandemic Impact Score.

Of note, Malvern was one of 15 downtowns to have at least one Experiential (EXP) retail use. This was a rising trend within the retail industry before the pandemic, and may continue to be post-pandemic as well.
Visits to Downtown

Geolocated, deidentified cellphone location data was analyzed to determine the pandemic’s impact on visits to the region’s downtowns and their trade areas. Visits to Malvern were as follows:

- **Pre-Pandemic**
  - Delaware: 1.3%
  - Maryland: 0.0%
  - New Jersey: 0.6%
  - New York: 0.0%
  - Pennsylvania: 98.1%

- **Shutdown | March 13 - June 15, 2020**
  - Delaware: 0.9%
  - Maryland: 0.0%
  - New Jersey: 0.6%
  - New York: 0.0%
  - Pennsylvania: 98.4%

- **Reopening | June 16 - October 31, 2020**
  - Delaware: 0.8%
  - Maryland: 0.0%
  - New Jersey: 0.4%
  - New York: 0.0%
  - Pennsylvania: 98.8%
Pre-pandemic, visitors to Malvern primarily came from Chester, Delaware, Montgomery, and Philadelphia Counties, as well as from beyond the region. During the pandemic, most visitors came from within Chester County.

Between August 2018 and March 2020, 8,934 people visited the downtown, which was nearly equal to the average of 8,800 visits for all of the downtowns.

During the shutdown (March 13 - June 15) there were 374 visits, and during the reopening period (June 16 - October 31) there were 621 visits to Malvern.
During the economic shutdown, there were 374 visits to Malvern compared to 2,400 visits during the same period in 2019. This equated to an 84% reduction.

The average number of visits during the shutdown period was 439 compared to 2,450 visits during the same period in 2019, which equated to an average reduction of 81%.

Gloucester City’s downtown had the smallest reduction in visits at 66%, and the average for the least impacted downtowns was 81%.
Visits to Malvern increased by 66% during the reopening period to a total of 621 visits. This was 81% fewer than the 3,231 visits that occurred during the same period in 2019.

On average, visits increased by 62% for all downtowns, to approximately 700 visits, and by 91% for the least impacted downtowns, to approximately 1,700 visits.

New Hope observed the greatest increase at 215%, with more than 2,800 visits during that time.
Malvern's pre-pandemic trade area was a 38 minute drive time. The trade area shrank by 16% during the shutdown, one of the lowest reductions observed, to 32 minutes. During reopening, the trade area recovered by 8% to 35 minutes.

The average pre-pandemic trade area was 31 minutes, with a 23% reduction during the shutdown down to 24 minutes. The average recovery was 10% for all downtowns up to 27 minutes.

At 69 minutes, New Hope was the only downtown with a trade area that extended beyond an hour. It was also the only downtown to have a larger trade area during reopening (72 minutes) than it did pre-pandemic.
